

WebriQ (<http://www.webriq.com>) is a Singapore based cloud computing software company, with subsidiary offices in Australia, UK and Cebu City, Philippines.

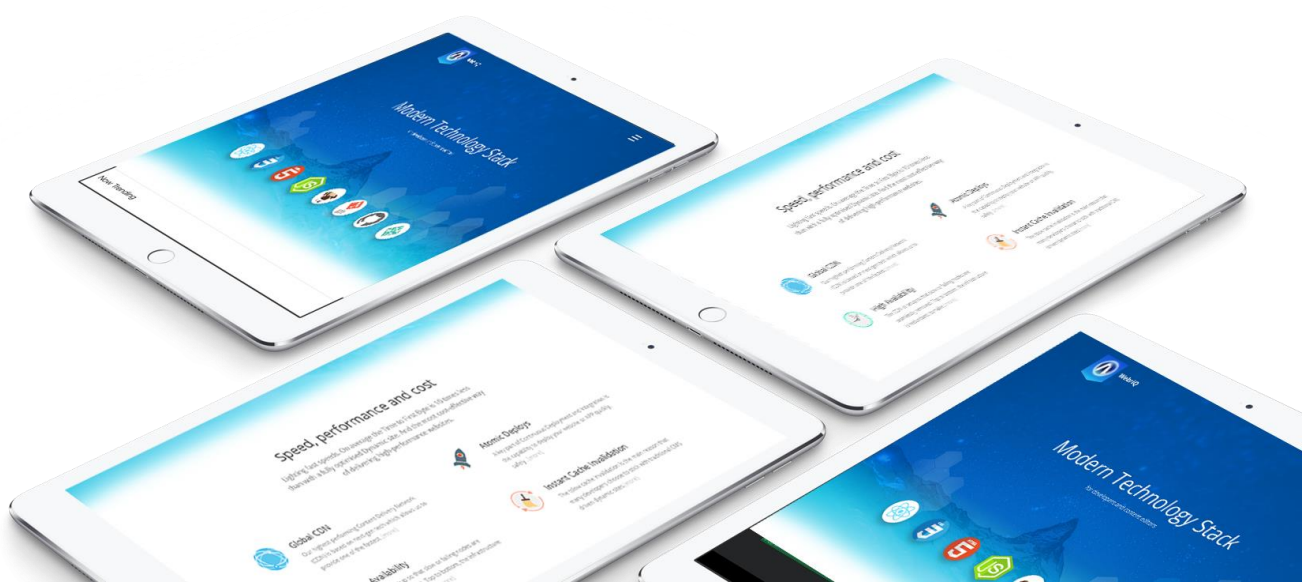

The company develops open-source web content management platforms to build and manage business websites, responsive websites and E-commerce websites. The capabilities of the platform are ranging from a simple informative website to a complex multisite and multilingual E-commerce, community or news portal.

Our Software-as-a-Service platform can build, deploy, host, manage and update Responsive Websites and Responsive E-commerce websites.

The Main Features of our **SaaS** platform

Speed, performance and cost

Lightning fast speeds. On average the Time to First Byte is 10 times less than with a fully optimized Dynamic site. The most cost-effective way of delivering high-performance websites.

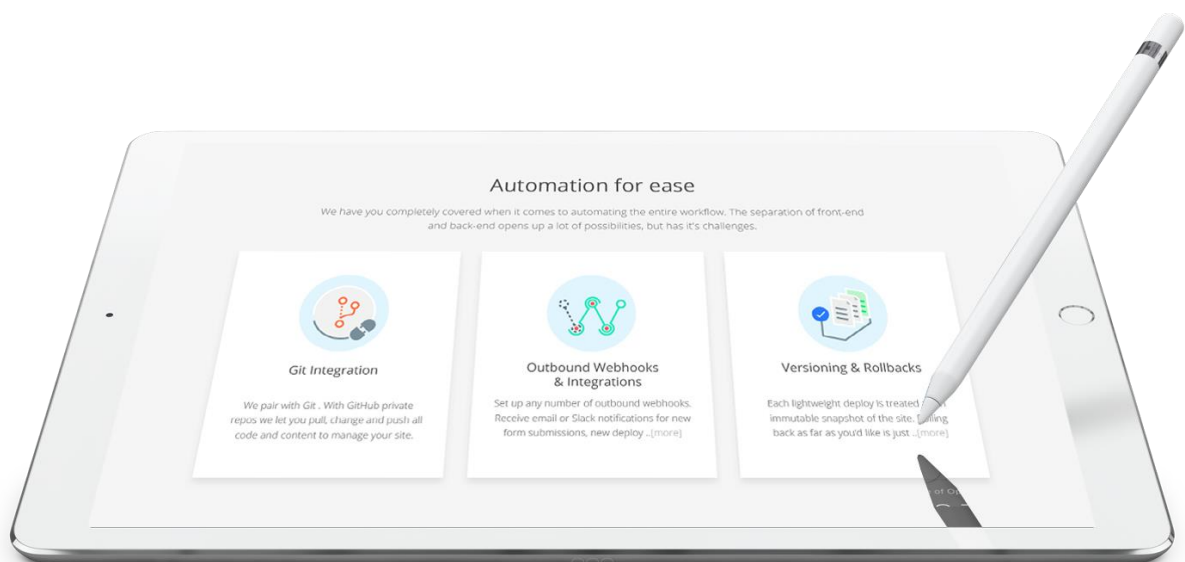

Built-in Security & Reliability

Performance and speed without Security is meaningless. SSL, HTTP2 and password protection are standard for any website.

Automation for ease

We have you completely covered when it comes to automating the entire workflow. The separation of front-end and back-end opens up a lot of possibilities, but has it's challenges.
